## Correction to: A novel murine model of multi-day moderate ethanol exposure reveals increased intestinal dysfunction and liver inflammation with age

Rachel H. McMahan<sup>1,2\*</sup>, Kevin M. Najarro<sup>1</sup>, Juliet E. Mullen<sup>1</sup>, Madison T. Paul<sup>1</sup>, David J. Orlicky<sup>3</sup>, Holly J. Hulsebus<sup>1,4</sup> and Elizabeth J. Kovacs<sup>1,2,4</sup>

Correction to: Immun Ageing 18, 37 (2021) https://doi.org/10.1186/s12979-021-00247-8

Following publication of the original article [1], the authors reported a publishing error in which images from Fig. 3 were inserted into Fig. 4 (the last 6 images). The correct Fig. 4 is presented below.

The original article [1] has been updated.

The original article can be found online at https://doi.org/10.1186/s12979-021-00247-8.

**Fig. 4** Moderate ethanol exposure in aged mice leads to increased neutrophils and monocytes in the liver. Flow cytometric analysis of hepatic non-parenchymal cells from aged and young mice given vehicle or ethanol. **A** Representative density plots showing gating strategy to define hepatic neutrophil, Kupffer Cell (KC), and infiltrating macrophage (IM) and monocyte populations. **B** Representative density plots showing the percent of hepatic CD45<sup>+</sup> cells that are neutrophils. **C-F** Bar charts showing the percent of CD45<sup>+</sup> cells that are neutrophils, Kupffer cells, infiltrating macrophages and monocytes in the indicated treatment groups. n = 4-8 mice per group. Data shown are mean  $\pm$  SEM. \*p < 0.05 from all other groups by two-way ANOVA with Tukey's multiple comparisons test
